

Molecular Dynamics Simulations of Water and Ice by TIP5P Code

*Motohiko Tanaka, Ph.D., Professor
Graduate School of Chubu University
Kasugai 487-8501, Japan*

Dielectric constant of water and ice [Ref. 1]

Water dielectric constant changes in temperature.
It decreases slowly and for 273 K it changes rapidly.
(Hobbs, Jhon, Eyring, PNAS, 1966).

Water	T (K), Dielectric constant of liquid
273 K	88 \leftarrow 298 K, $\epsilon = 80$
373 K	56
473 K	35

Ice I, T (K), Dielectric constant	
273 K	91.5
262.3 K	95.0
252.2 K	97.4
241 K	100
228.4 K	104 ← 230 K, $\epsilon = 104$
216.3 K	114

Simulation water starting at 298 K, NVE

The time $t=82,600$ starting from 298 K with 1728 water molecules, imposed electric field 10 GHz in x-direction with $E_0 = 5 \times 10^6$ V/cm and NV run (by 8.3 periods). Left: a) Total kinetic energy, b) rotational energy only, c) Coulombic energy, Lennard-Jones energy. The final temperature is about 405 K. Right: Pair distribution functions of a) O-O atoms, b) O-H atoms in $R=0-8$ Angstrom. O and H atoms are thus mixed showing heavy water interactions. Compare with the frozen ice of 230 K.

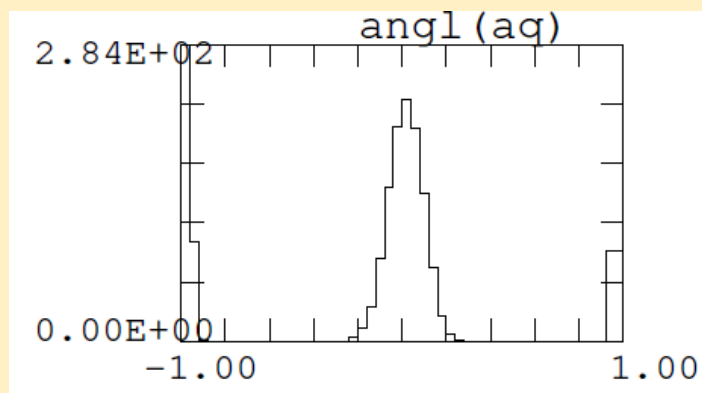

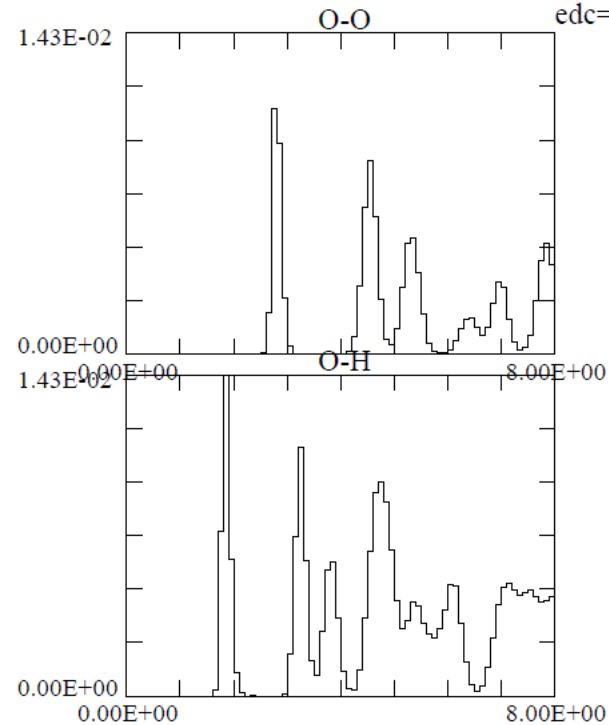

Water molecules starting 298 K.
 Left: Scatter plot of water at $t=80,000$, b) x-directional cosine distribution for the cross bins of $(-1.0, 1.0)$ at $t=72,500$ to $80,000$. Due to phase lag of molecules compared to imposed electric field, water is largely heated,

Simulation starting at ice 230 K, NVE

At temperature 230 K of 1728 water molecules, AC electric field 10 GHz in the x-direction with intensity $E_0 = 5 \times 10^6$ V/cm. Left: a) total kinetic energy, b) rotational energy only, c) Coulombic energy, d) Lennard-Jones energy, at the time of $t=84,000$. Right: cosine distribution of water in Bins $(-1,1)$ of the x-direction. No oscillations are really found at the imposed electric field.

Time $t=80,000$ of the temperature 230 K.
Left: a) Pair distribution functions of O-O atoms
b) O-H atoms for $R=0-8$ Angstrom. Peaks are well separated at this temperature.
Right: Scatter plot of water molecules where ice is frozen by 6-membered water clusters.
