Molecular Dynamics Simulations of Water and Ice by TIP5P Code

Motohiko Tanaka, Ph.D., Professor Graduate School of Chubu University Kasugai 487-8501, Japan

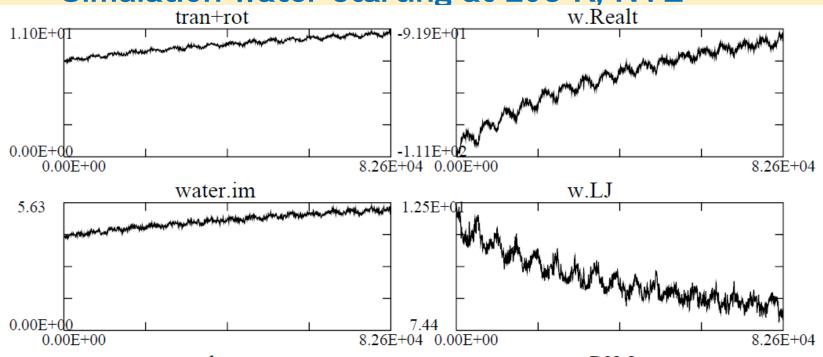

Dielectric constant of water and ice

Water dielectric constant changes in temperature. It decreases slowly and for 273 K it changes rapidly. (Hobbs, Jhon, Eyring, PNAS, 1966).

```
Water T (K), Dielectric constant of liquid 273 K $88 < -298 K, \varepsilon = 80 373 K $56 473 K $35
```

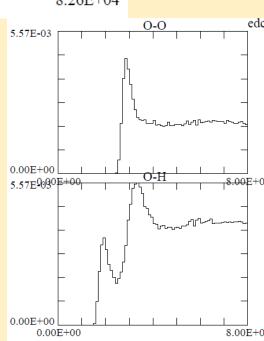

Ice I, T (K), Dielectric constant 273 K 91.5 262.3 K 95.0 252.2 K 97.4 241 K 100 228.4 K 104 \leftarrow 230 K, ε = 104 216.3 K 114

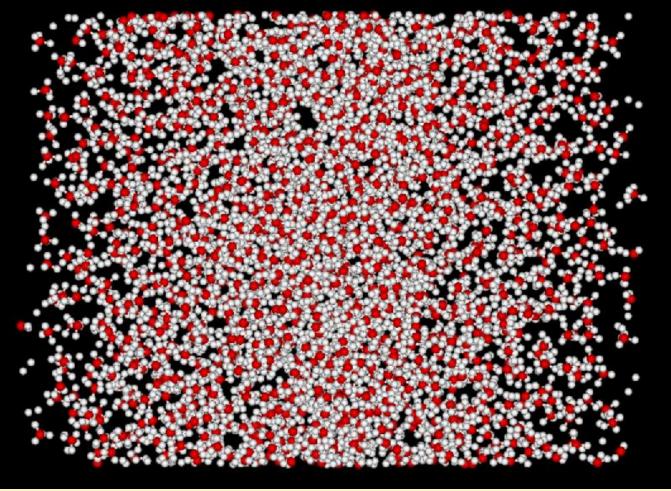

Simulation water starting at 298 K, NVE

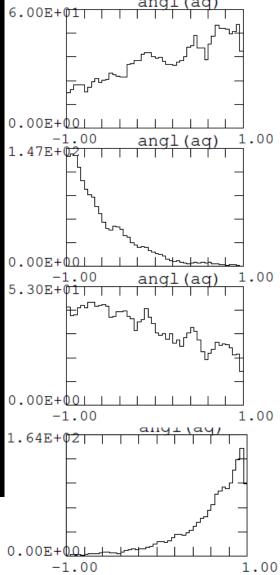

The time t=82,600 starting from 298 K with 1728 water molecules, imposed electric field 10 GHz in x-direction with E_0= 5x10^6 V/cm and NV run (by 8.3 periods). Left: a) Total kinetic energy, b) rotational energy only, c) Coulombic energy, Lennard-Jones energy. The final temperature is about 405 K.

Right: Pair distribution functions of a) O-O atoms, b) O-H atoms in R=0-8 Angstrom. O and H atoms are thus mixed showing heavy water interactions. Compare with the frozen ice of 230 K.

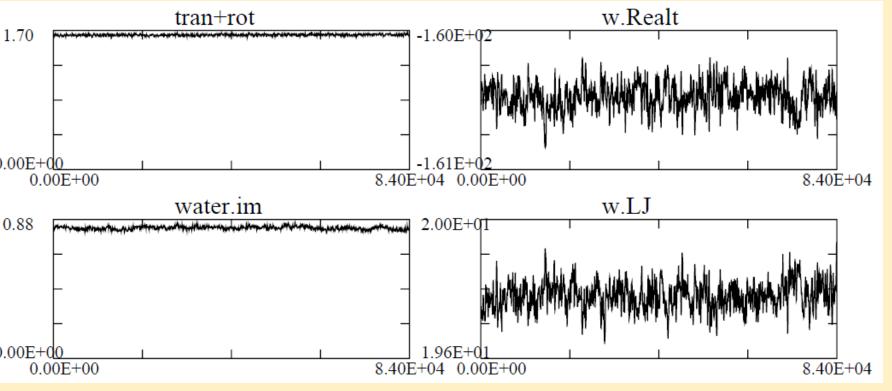

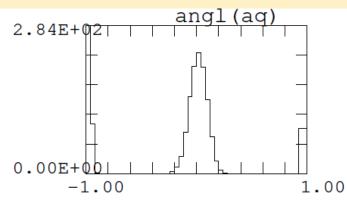

Water molecules starting 298 K. Left: Scatter plot of water at t=80,000, b) x-directional cosine distribution for the cross bins of (-1.0,1.0) at t=72,500 to 80,000. Due to phase lag of molecules compared to imposed electric field, water is largely heated.

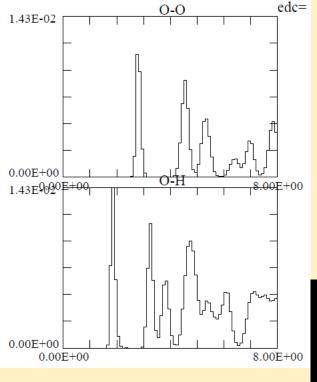

Simulation starting at ice 230 K, NVE

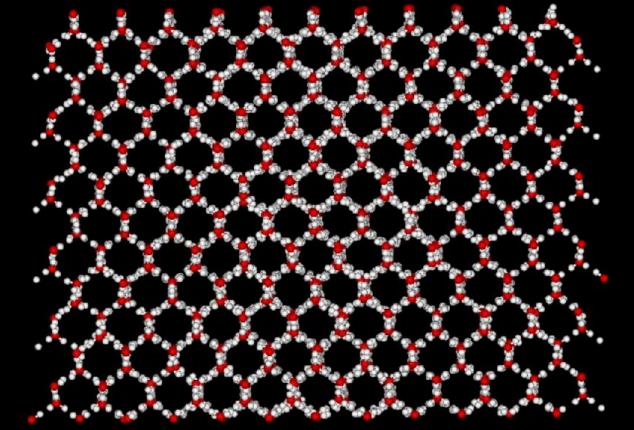

At temperature 230 K of 1728 water molecules, AC electric field 10 GHz in the x-direction with intensity E_0= 5x10^6 V/cm. Left: a) total kinetic energy, b) rotational energy only, c) Coulombic energy, d) Lennard-Jones energy, at the time of t=84,000. Right: cosine distribution of water in Bins (-1,1) of the x-direction. No oscillations are really found at the imposed electric field.

Time t=80,000 of the temperature 230 K.
Left: a) Pair distribution functions of O-O atoms
b) O-H atoms for R=0-8 Angstrom. Peaks are
well separated at this temperature.
Right: Scatter plot of water molecules where

Right: Scatter plot of water molecules where ice is frozen by 6-membered water clusters.
